

## **INFANT RESTRAINT SYSTEMS AND METHODS**

### **ABSTRACT OF THE DISCLOSURE**

In another embodiment, the invention provides a baby holding device that comprises a pillow having a medial region and two opposing arms extending from the medial region that define an inner well region. A securing system is operably coupled to the pillow and comprises a center holding strap that is configured to be placed between the baby's legs so as to extend over at least a portion of the baby's torso. The center holding strap may also be operably coupled to the opposing arms to hold the baby within the well region.
